

MIGUEL FERNÁNDEZ PÉREZ

Software Engineer | Systems Architecture

Mexico City | (+52) 998 735 2493 | miguelfernandezperez69@gmail.com
Portfolio | [Github: miguel807](#) | [LinkedIn: MiguelFernándezPérez](#)

Software Engineer with over 3 years of experience in developing scalable systems and microservices architecture. Specialized in logistics workflow optimization and business process automation. Focused on transitioning towards technical leadership and clean architecture design to ensure stability and growth for high-impact digital products.

WORK EXPERIENCE

Bicimex | Fullstack Developer

May 2025 – Present | Mexico City

- **Internal Systems Architecture:** Designed and developed custom Add-ons for warehouse management, significantly optimizing picking speed and inventory movement.
- **Process Automation:** Implemented procurement automation workflows using n8n, reducing manual errors and streamlining interdepartmental communication.
- **Microservices & Cloud:** Developed high-performance microservices and APIs using Django and FastAPI, deployed on the Google Cloud Platform ecosystem.

Tecopos | FullStack Developer

February 2024 – March 2025

- **Distributed Systems:** Designed microservices-based solutions using NestJS, Kafka, and Nats, ensuring robust asynchronous communication between modules.
- **Early Technical Leadership:** Conducted critical requirement analysis directly with clients and generated structural technical documentation to facilitate technology adoption by other engineering teams.

Informage Studios | Backend Developer

March 2022 – September 2023

- **Backend Services Development:** Contributed to the construction and maintenance of services using .NET Core and SQL Server, ensuring data integrity through Entity Framework.
- **Real-Time Interactivity:** Implemented bidirectional communication features with SignalR, enhancing immediate interface responsiveness for the end user.
- **System Robustness:** Collaborated on automated test execution, identifying bugs early and improving the reliability of delivered code.
- **Technical Resolution:** Contributed to the diagnosis and resolution of production incidents, optimizing response times and overall platform stability.

PERSONAL PROJECTS – INDEPENDENT

Centinela (Logistics & Last Mile): Full architecture for a delivery driver app featuring real-time tracking and route optimization (React Native, Expo, NestJS).

AvivPOS (Point of Sale for Retail): Comprehensive sales and inventory management system optimized for retail businesses (Node.js, PostgreSQL, Google Cloud).

Restaurant Management API: Project focused on Hexagonal Architecture and CQRS using .NET Core and Docker.

EDUCATION

Software Engineering | University of Informatics Sciences (UCI) | 02/2020 – 07/2023

SKILLS

Languages:	Python, JavaScript, TypeScript, C#
Frameworks:	Django, FastAPI, .Net Core, NestJs, Vuejs, React
Databases:	PostgreSql, Mysql, MongoDB, SqlServer
Tools & Cloud:	Google Cloud (GCP), n8n, Docker, Kafka, RabbitMQ, Git

LANGUAGES

Spanish (Native) | English Level B1 (CEFR)
